

Scoring scale 17 on CSBS: Number of different action schemes during symbolic play context.

1. Max is 11, min is 0

2. Some of these actions (puts in and puts on) are not symbolic, and on others, there is disagreement regarding whether the action indicates the child is 'pretending' (drinks with bottle, drinks with cup). Don't worry about that. Additionally, we are not coding "other action[s]", even if potentially symbolic or pretend play.

3. Score each a maximum of 1 time, regardless of number of instances of that action you see:

- a. puts in,
- b. puts on,
- c. drinks with bottle,
- d. drinks with cup,
- e. hugs,
- f. kisses,
- g. feeds with utensil,
- h. feels with bowl,
- i. stirs,
- j. scoops,
- k. pours

The agent of the action does not affect scoring. For example, who is fed or who drinks does not affect the score.
